DETAILED ACTION

This Office Action is in response to the communication filed on March 17, 2004.

Claims 1-27 have been examined and are pending in this application.

Restrictions

1. Upon initial review of the claims it appears that claims 1-27 differ in subject matter and therefore require a different search. In accordance with this a restriction is deemed proper.

2. Restriction to one of the following inventions is required under 35 U.S.C. 121:

Group I. Claims 1-9 and 10-12, drawn to a graphical user interface for representations of access control setting for resource, classified in Class 715, subclass 743.

Group II. Claims 13-16, drawn to a graphical user interface for representing access privileges for a user for one or more member resources in a collection of resource where in at least one display a region contain navigation structure graphical representation of the collection of resource, classified in Class 715, subclass 854.

Group III. Claims 17-20, drawn to the graphical user interface for representation a set variable number of items, classified in Class 715, subclass 772.

Art Unit: 2174

Group IV. Claims 22-27, and 21, drawn to the method for controlling access a document encoded in a markup language, classified in Class 707, subclass 9.

3. The inventions are distinct, each from the other because of the following reasons:

Inventions Groups I, II, III, and IV are related as subcombinations disclosed as usable together in a single combination. The subcombinations are distinct from each other if they are shown to be separately usable. In the instant case, while invention I has separate utility such as providing a graphical user interface for representations of access control setting for resource, invention II provides a graphical user interface for representing access privileges for a user for one or more member resources in a collection of resource where in at least one display a region contain navigation structure graphical representation of the collection of resource, invention III provides the graphical user interface for representation a set variable number of items, and invention IV provides the method for controlling access a document encoded in a markup language . See MPEP § 806.05(d).

4. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification and divergent subject matter, and because the searches for the individual Groups are not coextensive, restriction for examination purposes as indicated is proper.

Art Unit: 2174

5. Because these inventions are independent or distinct for the reasons given above and there would be a serious burden on the examiner if restriction is not required because the inventions require a different field of search (see MPEP § 808.02), restriction for examination purposes as indicated is proper.

6. Applicant is advised that the response to this requirement to be complete must include an election of the invention to be examined even though the requirement is traversed.

7. Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 C.F.R. § 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a diligently-filed petition under 37 C.F.R. § 1.48(b) and by the fee required under 37 C.F.R. § 1.17(h).

Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Linh K. Pham whose telephone number is (571) 270-3230. The examiner can normally be reached on Monday to Friday from 7:30AM to 5:00PM (EST).
